

Adjust the Image Size

Altering the image is often what is necessary to create a great shot. You can easily crop, rotate, adjust the perspective, and expand the image. These are simple edits that can be made at any time. Having these tools easily accessible makes Snapseed the best app for photo editing.

The next step is to edit the tint. Tint is the mixture of color with white. You can adjust the tint to fix a color overlay or cast that may not look right. Use tint to change the mood in the image. A positive tint will make the image look purple and a negative tint will look green.
