

There are two ways to open an image in Snapseed. When you first open the app, tap on the plus icon or anywhere to open the image. Next, you can choose which image you would like to open. You can choose from Open from Device, Camera, and Open Latest Image. Often, the best option is to choose “open from device” and then you can choose from any photo on your phone. Then tap on the photo you would like to open in the editing app Snapseed.

---

## Looks

---

There are two editing options you can choose from, Looks or Tools. To quickly edit an image, “looks” is the best way to instantly adjust your image with different filters. Tap on the looks options to see the different options of looks you can instantly add to your image. Press down on the center of the image to see the original image. The last step is to tap on the check mark if you are satisfied with the picture.

---

## Tools

---

The tools feature in the Snapseed editing app has many editing options, filters, and advanced settings. Here are some very simple steps to edit quickly. The first step is to focus on learning how to Auto adjust the image. When you feel comfortable, you can learn more advanced editing tools.
