

Crop

Cropping is easy and any image can be cropped, but if you are using it on social media or other places, it is nice to know what the cropping ratios mean.

Free-	Where you can set the aspect ratio top to bottom or right to left. Your image can be any ratio.
Original-	The ratio based on what the original image was taken in.
1:1-	This ratio will create a square image.
DIN-	The European standard for aspect ratios (Example A4, A3, etc.)
3.2-	The aspect ratio that is usually used with DSLR Cameras
4:3-	The ratio that is often used for screen and video
5:4-	The ratio which is used for many US page sizes. This works well for 8x10, or 16x20 page sizes
16:9-	The aspect ratio that is used for most video and TV displays
