

## Glamour Glow

Getting a warm soft image can sometimes be hard to do but with this Snapseed editing trick it is easy to add glamor glow. This filter will take away the effects of harsh light and will create a smooth image. You can change the glow, saturation, and warmth of the image. Swipe right or left to adjust these features. To adjust the glow, slide right to increase the degree of softening. To increase or decrease the vibrance of the colors adjust the saturation, slide right or left to adjust the warmth and add a more warm or cool tone] to the image. I like to use this look on fall photos to add a glowing effect.
