

---

# Noir

---

If you want to create black and white images that look cinematic or are with darkroom-inspired tones and washed looks use Noir. Tap on the card deck icon to select the Noir style. The adjustment menu includes: brightness, wash, grain, and filter strength. The wash effect applies dynamic shadows and highlights that look like over-processing a print in a dark room.

---

# Lens Blur

---

Create lens blur by choosing linear or elliptical focus. Pinching with two fingers to adjust the size, shape, and rotation of the focus. Tap on the card deck option to choose the shape of the highlights. Easily, enhance the image with menu adjustments. You can alter the blur strength, transition swipe, and vignette strength. The transition swipe increases or decrease the amount of fade between the focused and blurred
